## LIST OF FORMULES

1. Mean $\bar{x}$
(a) For raw data $\bar{x}=\frac{\sum x_{i}}{n}=\frac{x_{1}+x_{2}+\ldots+x n}{n}$
i.e. $\bar{x}=\frac{\text { sum of observations }}{\text { no of observations }}$
(b) For Grouped data
(i) If small calculation then we apply Direct method
$\bar{x}=\frac{\sum f_{i} x_{i}}{\sum f_{i}}$
(ii) If calculations are tedius or observations are large then we apply short cut/ Assumed Mean method or step Deviation method

## Short cut/Assumed Mean Method

$$
\begin{aligned}
& \bar{x}=a+\frac{\sum f_{i} d_{i}}{\sum f_{i}}, a \rightarrow \text { assumed mean } \\
& d_{i}=x_{i}-a
\end{aligned}
$$

## Step Deviation Method

$$
\bar{x}=a+\frac{\Sigma f_{i} u_{i}}{\Sigma f_{i}} \times h, u_{i}=\frac{d_{i}}{h}, h \rightarrow \text { class size }
$$

## 2. Median

(a) For ungrouped data we first arrange data in ascending or descending order.

Count number of times say n. If $n$ is odd then Median $=\left(\frac{n+1}{2}\right)^{\text {th }}$ observation

It $n$ is even then Median $=\frac{\left(\frac{n}{2}\right)^{t h}+\left(\frac{n}{2}+1\right)^{t h}}{2}$ obsevation

## Mathematics-X

(b) For grouped data

$$
\text { Median }=l+\frac{\left(\frac{n}{2}-c f\right)}{f_{i}} \times h
$$

(3) Mode $=l+\frac{\left(f_{1}-f_{o}\right)}{\left(2 f_{1}-f_{o}-f_{2}\right)} \times h$ (For grouped data)

For ungrouped data mode is the most frequent observation.

## NOTES:

1. Empirical relationship between three measures of central tendency:
mode $=3$ median -2 mean.
2. It class interval is discontinuous then make it continuous by subtracting 0.5 from Lower Limit and adding 0.5 to upper limit.
3. $x_{i}=$ class mark $=\frac{\text { Upper Limit }+ \text { Lower Limit }}{2}$
4. $h=$ class size $=$ Upper Limit - Lower limit
5. Modal class $\rightarrow$ Aclass interval having maximum frequency.
6. Median class $\rightarrow$ A class interval is which cumulative frequency is greater then and nearest to $\frac{n}{2}\left(n=\Sigma f_{i}\right)$
7. The median of a group data can be obtained graphically as the $x$ coordinate of the point of intersection of more than and less than ogive.

8. It mean of $x_{1}, x_{2}, \ldots . . x_{n}$ is $\bar{x}$ then
(a) Mean of $k x_{1}, k x_{2} \ldots ., k x_{n}$ is $k \bar{x}$
(b) Mean of $\frac{x_{1}}{k}, \frac{x_{2}}{k} \ldots . . \frac{x_{n}}{k}$ is $\frac{\bar{x}}{k}$
(c) Mean of $x_{1}+k, x_{2}+k, \ldots \ldots, x_{n}+k$ is $\bar{x}+k$
(d) Mean of $x_{1}-k, x_{2}-k, \ldots . . x_{n}-k$ is $\bar{x}-k$
9. It mean of $n_{1}$ observation is $\bar{x}_{1}$ and mean of $\mathrm{n}_{2}$ observation is $\bar{x}_{2}$ then their combined

$$
\text { Mean }=\frac{n_{1} \bar{x}_{1}+n_{2} \bar{x}_{2}}{n_{1}+n_{2}}
$$

10. $\Sigma x i=n \bar{x}$
11. Range of given data is given by

Highest observation - Lowest observation
12. Graphical Representation of Mode is a Histogram

## SECTION-A

1. What is the class mark of a class $a-b$.
2. Find the mean of all the even numbers between 11 and 21.
3. An ogive curve is used to detemine
(a) Range
(b) Mean
(c) Mode
(d) Median
4. State True/False

Mean can be determined graphically

## SECTION-B

5. The mean of 50 observations is 20 . If each observation is multiplied by 3 , then what will be the new mean?
6. The mean of 10 observations is 15.3 . If two observations 6 and 9 are replaced by 8 and 14 respectively. Find the new mean.
