

ITL PUBLIC SCHOOL Pre-Board 1 (2020-21)

Date: 11.01.2021 Class: X

Mathematics (Code-041)

Time: 3 Hour M.M: 80

General Instructions:

1. This question paper contains two parts A and B.

2. Both Part A and Part B have internal choices.

Part - A:

1. It consists two sections- I and II.

- 2. Section I has 16 questions of 1 mark each. Internal choice is provided in 5 questions.
- 3. Section II has 4 questions on case study. Each case study has 5 case-based sub-parts. An examinee is to attempt any 4 out of 5 sub-parts.

Part - B:

- 1. Question No 21 to 26 are Very Short Answer Type questions of 2 mark each,
- 2. Question No 27 to 33 are Short Answer Type questions of 3 marks each
- 3. Question No 34 to 36 are Long Answer Type questions of 5 marks each.
- 4. Internal choice is provided in 2 questions of 2 marks, 2 questions of 3 marks and 1 question of 5 marks.

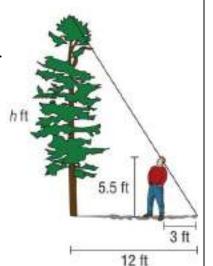

Question	Part-A	Marks
No.		Allocated
	Section-1	
	Section I has 16 questions of 1 mark each. Internal choice is provided in 5 questions.	
1	If the LCM of p and 18 is 36 and the HCF of p and 18 is 2, then find the value of p.	1
	OR	
	Can two numbers have 18 as their HCF and 380 as their LCM? Give reason.	
2	Find the value of m so that the quadratic equation $mx(x-3) + 9 = 0$	1
	has two equal roots.	
3	For what value of k, the pair of equations $4x - 5y = 9$, $2x + ky = 11$ has no solution?	1
	OR	
	Find whether the following pair of linear equations is consistent or inconsistent:	
	3x + 2y = 8,	
	6x - 4y = 9	

4	One card is drawn at random from a pack f 52 cards. Find the probability that the card drawn is a black face card.	1
5	Find the 10 th term from the end of an A.P. 4, 9, 14,, 254. OR	1
	If m times the m th term of an A.P. is equal to n times its n th term. Find its $(m + n)$ th term.	
6	Check whether the given pair of triangles is similar or not. Justify.	1
7	In a triangle ABC, right angled at B, the ratio of AB to AC is $1:\sqrt{2}$. Find the value of $\frac{2tanA}{1+tan^2A}$. OR If $\sqrt{3}\sin\theta - \cos\theta = 0$ and $0^\circ < \theta < 90^\circ$, find the value of θ .	1
8	Find the length of tangent drawn from a point 8 cm away from the centre of a circle of radius 6 cm. OR In the given figure, O is the centre of a circle, AB is a chord and AT is the tangent at A. If $\angle AOB = 100^{\circ}$, then calculate $\angle BAT$.	1
9	Draw a line segment of length 5 cm. Using compasses and ruler, find a point P on it which divides it in the ratio 2:1.	1
10	Form a quadratic polynomial whose zeroes are $3 + \sqrt{2}$ and $3 - \sqrt{2}$.	1
11	A wire is looped in the form of a circle of radius 28 cm. It is rebent into a square form. Find the length of the side of the square.	1

12	A bag contains 20 marbles. The probability of drawing a red marble	1
	is $\frac{2}{\pi}$. Find the number of red marbles in the bag.	
	5	
13	State whether the sequence whose n^{th} term is $a + 5d$ is an A.P. or	1
	not. Justify your answer.	
14	An observer 1.4 m tall is 28.6 m away from a tower which is 30 m	1
	high. Determine the angle of elevation of the top of the tower from	
	his eyes.	
15	How are the tangents drawn at the ends of a diameter of a circle	1
10	related to each other? Explain by giving valid reasons.	-
16	Metallic spheres of radii 6 cm, 8 cm and 10 cm, respectively, are	1
	melted to form a single solid sphere. Find the radius of the resulting	
	sphere.	
	Section-II	
	Case study-based questions are compulsory. Attempt any four	
	sub parts of each question. Each subpart carries 1 mark.	
17		4
17	sub parts of each question. Each subpart carries 1 mark.	4

But it takes 6 minutes to saddle the horse (i.e. to fasten the seat on the back). How far can you get before the horse catches you! i. We know that the Distance covered by an object is given as: Distance = Speed × Time Taking the distance covered as y km and time as x minute, the given situation can be expressed as: (a) y = 0.2x	4
17	Sub parts of each question. Each subpart carries 1 mark. Case Study based-1 You versus Horse It's a race! You can run 0.2 km every minute. The Horse can run 0.5 km every minute. But it takes 6 minutes to saddle the horse (i.e. to fasten the seat on the back). How far can you get before the horse catches you! i. We know that the Distance covered by an object is given as: Distance = Speed × Time Taking the distance covered as y km and time as x minute, the given situation can be expressed as: (a) y = 0.2x y = 0.5(x - 6)	4
17	Sub parts of each question. Each subpart carries 1 mark. Case Study based-1 You versus Horse It's a race! You can run 0.2 km every minute. The Horse can run 0.5 km every minute. But it takes 6 minutes to saddle the horse (i.e. to fasten the seat on the back). How far can you get before the horse catches you! i. We know that the Distance covered by an object is given as: Distance = Speed × Time Taking the distance covered as y km and time as x minute, the given situation can be expressed as: (a) y = 0.2x y = 0.5(x - 6) (b) x = 0.2y	4
17	Sub parts of each question. Each subpart carries 1 mark. Case Study based-1 You versus Horse It's a race! You can run 0.2 km every minute. The Horse can run 0.5 km every minute. But it takes 6 minutes to saddle the horse (i.e. to fasten the seat on the back). How far can you get before the horse catches you! i. We know that the Distance covered by an object is given as: Distance = Speed × Time Taking the distance covered as y km and time as x minute, the given situation can be expressed as: (a) y = 0.2x y = 0.5(x - 6)	4

	(d) $x = 0.2y$	
	x = 0.5y + 6	
	ii. The graphical representation of the above situation will	
	give:	
	(a) A pair of lines intersecting at a point	
	(b) A pair of parallel lines	
	(c) A pair of coincident lines	
	(d) None of these	
	iii. The point where you get caught by the horse i.e. the solution	
	of the problem stated in (i) is:	
	(a) (2, 8)	
	(b)(10,2)	
	(c)(8,2)	
	(d)(2, 10)	
	iv. A pair of linear equations is inconsistent, if	
	(a) It has exactly one solution	
	(b) It has many solutions	
	(c) It has no solution	
	(d) It has one or many solutions	
	v. Equation of a line parallel to $x + 4y = 6$ is:	
	(a) $2x + 8y = 12$	
	(b) $x + 4y = -6$	
	(c) $4x + y = 6$	
	(d) 4x + y = -6	
18	Case Study based-2	4
	Similar Triangles and Forestry	
	Foresters, environmentalists, and other professionals in the timber	
	industry take many measurements in their field work for purposes	
	including forest management planning, forest health monitoring,	
	and timber sales appraisal. Two tools commonly used are a	
	clinometer, to measure angles of elevation, and a Biltmore Stick, to	
	measure diameter and height of trees. These tools are based on the	
	concepts of similar triangles.	
		•

i. A tree has a shadow 12 feet long.A forester's shadow is 3 feet long.If the height of the forester is5.5 feet, then what will be the height of the tree?

- (a) 15 feet
- (b) 20 feet
- (c) 22 feet
- (d) 25.5 feet
- ii. If the dimensions are given as follows, find the correct relationship between x, a, b and c.

(a)
$$a = \frac{x(b+c)}{c}$$
(b)
$$a = \frac{x(b+c)}{b}$$
(c)
$$a = \frac{c(b-x)}{x}$$
(d)
$$a = \frac{ab-cx}{x}$$

- iii. Which one of the following is not correct?
 - (a) All similar figures having the same area need to be congruent.
 - (b) All the corresponding sides of two similar triangles are proportional.
 - (c) All congruent figures are similar, but the similar figures need not be congruent.
 - (d) All congruent figures are similar, and all similar figures are congruent.
- iv. The ratio of two corresponding sides in similar figures is called the scale factor. The possible scale factor of the smaller triangle to the larger triangle in sub-part (i) can be:
 - (a) 1:3
 - (b) 1:4
 - (c) 3:1
 - (d)4:1

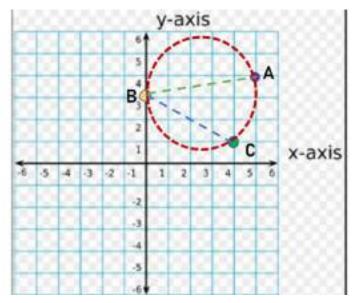

- v. If the scale factor of the similar triangles is 4:9, then the ratio of the areas of these triangles will be:
 - (a) 2:3
 - (b)4:9
 - (c) 81:16
 - (d) 16:81

19 Case Study based-3

4

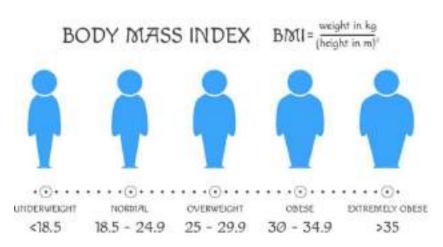

Tree Plantation Activity

In a school, the students of class X participated in tree plantation activity. They worked in 4 groups. The trees planted by the first three groups are represented by the letters A, B and C respectively in the figure given below:

- i. The coordinates for the positions of the trees A, B and C respectively are given as:
 - (a) (4, 5), (0, 3) and (4, 1)
 - (b) (5, 4), (3, 0) and (4, 1)
 - (c) (4, 5), (0, 3) and (1, 4)
 - (d)(5, 4), (0, 3)and (4, 1)
- ii. What is the distance between the trees A and B.
 - (a) 5 units
 - (b) $\sqrt{24}$ unis
 - (c) $\sqrt{26}$ unis
 - (d) $2\sqrt{5}$ unis

	iii. How far is tree C from tree B? (a) $2\sqrt{5}$ unis (b) $2\sqrt{3}$ unis (c) $2\sqrt{3}$ unis (d) $3\sqrt{5}$ unis (e) $3\sqrt{2}$ unis	
	iv. Tree D is to be planted by the fourth group in such a way that it lies exactly in the mid-way of the trees A and B. Then the position of tree D will be given as: (a) $\left(2, \frac{7}{2}\right)$ (b) $\left(\frac{5}{2}, \frac{1}{2}\right)$ (c) $\left(\frac{5}{2}, 3\right)$ (d) $\left(\frac{5}{2}, \frac{7}{2}\right)$	
	v. As per the availability of space and time, the school decided to plant one more tree named as E on the line joining trees B and C such that it divides the line BC in the ratio1:2. Then position of the tree E will be given as: (a) $\left(\frac{5}{3}, \frac{7}{3}\right)$ (b) $\left(\frac{4}{3}, \frac{7}{3}\right)$ (c) $\left(\frac{5}{2}, \frac{7}{2}\right)$ (d) $(2, 4)$	
20	Case Study based-4	4
	The statistics of Body Mass Index	
	Students of class X were given a project to find the BMI. Body Mass Index (BMI) is a measurement of a person's weight with respect to his or her height. It is more of an indicator than a direct measurement of a person's total body fat. It is given as: Weight (Kg)	
	(Height in metres)	

As a part of the project, 60 students of class X surveyed, and the weights were grouped in a tabular form:

Weight (in Kg)	Number of students
40 – 44	4
44 – 48	6
48 - 52	10
52 - 56	14
56 - 60	10
60 - 64	8
64 – 68	6
68 - 72	2

- i. The cumulative frequency corresponding to the class 60-64 is:
 - (a) 35
- (b) 52
- (c) 45
- (d) 58
- ii. The sum of the upper limit of the median class and the lower limit of the modal class is:
 - (a) 108
- (b) 100
- (c) 112
- (d) 104
- iii. The median weight of a student is approximately equal to:
 - (a) 50
- (b) 52.5
- (c) 49.84
- (d) 54.85
- iv. If the weight of a student is 68 kg and the square of the height in m is 2.5, then his/her BMI will be equal to:
 - (a) 27.2
- (b) 50.2
- (c) 24
- (d) 21.5

	v. The empirical relation between the three measures of central tendencies is given as: (a) 2 Median = 3 Mean – Mode. (b) 2 Mean = 3 Median – Mode. (c) 2 Mode = 3 Median – Mean. (d) 2 Mean = Median – 3Mode.	
	Part –B	
	All questions are compulsory. In case of internal choices, attempt any one	
21	Prove that $2 - 3\sqrt{5}$ is an irrational number, given that $\sqrt{5}$ is irrational.	2
22	Find the sum of first 21 terms of an A.P., whose 2 nd term is 8 and 4 th term is 14.	2
23	Determine the ratio in which the line $x + y = 5$ divides the line segment joining the points A $(2, -2)$ and B $(3, 7)$. OR Check whether A $(5, -1)$, B $(6, 2)$ and C $(7, -3)$ are the vertices of an isosceles triangle or not.	2
24	Find the value of cosec30° geometrically.	2
25	A circle is touching the side BC of a \triangle ABC at P and is touching AB and AC when produced at Q and R respectively. Prove that $AQ = \frac{1}{2}$ (perimeter of \triangle ABC) OR A quadrilateral ABCD is drawn to circumscribe a circle (see figure). Prove that $AB + CD = AD + BC$.	2
	D R C Q	
26	Draw a pair of tangents to a circle of radius 4.5 cm, which are inclined to each other at an angle of 65°.	2

27	There is a circular path around a sports field. Sonia takes 18 minutes to drive one round of the field, while Ravi takes 12 minutes for the same. Suppose they both start from the same point and at the same time and go in the same direction. After how many minutes will they meet again at the starting point?	3
28	Find the zeroes of the polynomial $5\sqrt{5}x^2 + 30x + 8\sqrt{5}$. Also verify the relationship between its zeroes and coefficients.	3
29	Solve the given system of linear equation graphically: 4x - 5y - 20 = 0; $3x + 5y - 15 = 0Determine the vertices of the triangle formed by the lines, representing the above equations and the y – axis.$	3
30	The area of a rectangular plot is 528 m ² . The length of the plot in meters is one more than twice its breadth. Find the length and breadth of the plot.	3
31	State and prove Thales theorem. OR BL and CM are medians of a triangle ABC right angled at A. Prove that $4 (BL^2 + CM^2) = 5 BC^2$.	3
32	Using the identity $\sec^2\theta = 1 + \tan^2\theta$, prove that: $\frac{\sin\theta - \cos\theta + 1}{\sin\theta + \cos\theta - 1} = \frac{1}{\sec\theta - \tan\theta}$	3
33	In Fig., a square OABC is inscribed in a quadrant OPBQ. If OA = 20 cm, find the area of the shaded region. (Use π = 3.14) OR	3
	UK .	

34	(i) the length of the arc (ii) area of the segment formed by As observed from the top of a 75 level, the angles of depression of ship is exactly behind the other or find the distance between the two Water in a canal, 30m wide and 1 lokm/hr. How much area will it is standing water is required for irrig	m high lighthouse from the seatwo ships are 30° and 45°. If one in the same side of the lighthouse, ships. 2m deep is flowing at the rate of the rate	5
	A tent is in the shape of a cylinder the height and diameter of the cylinder	r surmounted by a conical top. If indrical part are 2.1 m and 4 m	
36	A tent is in the shape of a cylinder the height and diameter of the cylinder	r surmounted by a conical top. If indrical part are 2.1 m and 4 m of the top is 2.8 m, find the area of nt. Also, find the cost of the 500 per m ² .	5
36	A tent is in the shape of a cylinder the height and diameter of the cylinder respectively, and the slant height the canvas used for making the tent canvas of the tent at the rate of Rs. The mean of the data in the following frequencies a and b.	r surmounted by a conical top. If indrical part are 2.1 m and 4 m of the top is 2.8 m, find the area of nt. Also, find the cost of the 500 per m ² .	5
